## DETAILED ACTION

### *Specification*

1. The abstract of the disclosure is objected to because it should not compare the invention with the prior art. Correction is required. See MPEP § 608.01(b).

### *Claim Objections*

2. Claim 4 is objected to because of the following informalities: it is not clear whether claim 4 depends on claim 1 or 3. Appropriate correction is required.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1, 2, 7, 8, 11, 12, 15, 16 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Kim (US 6,490,274).

Regarding claims 1, 7, 11, 15, Kim discloses an telephony service system comprising the following features: a Broadband Residential Gateway (Fig. 2 REF 200) coupled to a plurality of customer premises equipment and to a Hybrid Fiber Coaxial network, a Head End Hub (Fig. 2 REF 202, 204, 206, 207, 216) comprising: a Cable Modem Bank (Fig. 2 REF 206, 207) coupled

Art Unit: 2664

to an Edge Router (Fig. 2 REF 216) and to a Head End (Fig. 2 REF 202), the Edge Router (Fig. 2 REF 216), coupled to the Cable Modem Bank (Fig. 2 REF 206, 207) and to a High Speed Packet Network (Fig. 2 REF 254), wherein the Head End Hub (Fig. 2 REF 202, 204, 206, 207, 216) is coupled to the Hybrid Fiber Coaxial network and to a High-Speed Packet Network (Fig. 2 REF 254), the High Speed Packet Network (Fig. 2 REF 254) coupled to the Head End Hub and to an Internet Protocol Central Office (Fig. 2 REF 260), and the Internet Protocol Central Office (Fig. 2 REF 260), coupled to the High Speed Packet Network (Fig. 2 REF 254) and to an external network (Fig. 2 REF 260).

Regarding claims 2, 8, 12, 16, Kim discloses the plurality of customer premises equipment includes at least one of: a television, a telephone and a personal computer (Fig. 2, REF 208,210).

### ***Claim Rejections - 35 USC § 103***

5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

6. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later

Art Unit: 2664

invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

7. Claims 3-6, 9, 10, 13, 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kim (US 6,490,274) in view of LaPier et al. (US 6,333,931).

Kim discloses the claimed features described above. Kim does not disclose the features of: regarding claims 3, 9, 13, external network is a public switched telephony network with a Signaling System Seven and an Operation, Administration, Maintenance and Provisioning system; regarding claims 4, 10, 14, the public switched telephony network includes a billing system; regarding claim 5, the High Speed Packet Network is coupled to an Internet Protocol Local Number Portability database; regarding claim 6, the High Speed Packet Network is coupled to a Local Service Management System. LaPier et al. discloses an apparatus for interconnecting a circuit-switched network and a packet-switched network comprising the following features: external network is a public switched telephony network with a Signaling System Seven (Fig. 1, REF 20) and an Operation, Administration, Maintenance and Provisioning system (Fig. 1, REF 12); the public switched telephony network includes a billing system (See column 19, lines 2-15); the High Speed Packet Network is coupled to an Internet Protocol Local Number Portability database (See column 16, lines 17-51); the High Speed Packet Network is coupled to a Local Service Management System (Fig. 1, REF 16). It would have been obvious to one of the ordinary skill in the art at the time of the invention to modify the system of Kim by using the features, as taught by LaPier et al., in order to improve signaling security and data channel security. See column 2, lines 9-11.
